

Nuance® PowerShare™ Network

How to Receive Imaging via PowerShare at Williamson Health

We have been working with PowerShare to make the intake of outside imaging easier at Williamson Health.

We are now a HUB customer, and as such, we can receive exams from any other facility that also uses PowerShare. We can also help assist facilities that wish to start using PowerShare with the process.

If you wish to have a facility send images to Williamson Health, you can reach out to them and ask if they use PowerShare. If they do, ask them to send the imaging to Williamson Health.

If we are already in their PowerShare Contacts, they can just share the imaging with us, or they will send us an invite (which we will accept) to join their Contacts and then they can share the images with us.

With our new PACS, we have the ability for those outside Images to flow right into PACS and be available for viewing within moments of receiving them. When you search for a patient, the outside imaging will have “OUT” appended to the end of the MRN and Accession Number, so you know it is not a Williamson Health exam.

Also, if a facility does not use PowerShare, but wants to send to us electronically, we have a link we can provide that will allow them to send directly to us without having to set up PowerShare:

<https://widgets.nuancepowershare.com/easyupload/williamsonhealth>

A few notes:

Because these are outside images, there will be no links in whichever EMR you are accustomed to using to launch Williamson Health imaging.

*Not all facilities use PowerShare and some are not willing to learn how they can. Their best option may be to send discs.

*Each outside facility processes requests at their own pace.

*These are things that Williamson Health cannot control.
